

(a)

Intervene after upstream image processing; keep model weights, [CLS], sequence length, and downstream blocks fixed.

(b)

Geometry constraint

(c)

Diversity constraint and boundary

shared token
collapse

independent tokens
rescue

Scale alone is not enough; downstream adaptation is coordinate and orientation-sensitive. **Late patch content can be fungible while geometry and token-set diversity remain necessary. Replaceability under a full sequence does not imply a superior compression rule.**
